

Return & Error Code reference table

Return & Error Code reference table

The following table details the various Return & Error Codes that may be encountered while using the ThreatMetrix SDK library:

Value	Description
THMStatusCodeNotYet	The profiling request is not yet complete.
THMStatusCodeOk	Device profiling completed with no errors.
THMStatusCodeConnectionError	A connection issue was encountered between the device and the ThreatMetrix online server. Please ensure you are referencing the server correctly and you can access it from the device. See the Profiling chapter in this document for more information.
THMStatusCodeHostNotFoundError	The hostname of the ThreatMetrix server could not be resolved. Please ensure you are referencing the server correctly and you can access it from the device. See the Profiling chapter in this document for more information.
THMStatusCodeNetworkTimeoutError	There was a timeout while communicating with the ThreatMetrix server. This may occur if the devices internet connection is disabled while communicating with the server.
THMStatusCodeHostVerificationError	The ThreatMetrix server hostname in use does not match the hostname in the certificate. This may be evident when using the Advanced Profiling feature, or when implementing in a proxied scenario by using the Custom URL option. Please ensure a valid certificate is in use on the target hostname specified in the Custom URL option.
THMStatusCodeInternalError	A miscellaneous error was detected. Please check the inputs/options used when calling the library.
THMStatusCodeInterruptedError	The profiling request was interrupted/canceled mid-flight.
THMStatusCodePartialProfile	A connection error resulted in partial profiling.
THMStatusCodeInvalidOrgID	This is returned if an invalid or NULL value is present in the org_id calling option.
THMStatusCodeNotConfigured	This is returned if the object is not configured probably. This might happen due to passing wrong options to configure method
